```
Memory overhead per virtual machine ≈ (1.002 × requested memory) \
              + 218 MiB \
              + 8 MiB × (number of vCPUs) \
              + 16 MiB × (number of graphics devices) \
              + (additional memory overhead)
```

1. Required for the processes that run in the `virt-launcher` pod.
2. Number of virtual CPUs requested by the virtual machine.
3. Number of virtual graphics cards requested by the virtual machine.
4. Additional memory overhead:

- If your environment includes a Single Root I/O Virtualization (SR-IOV) network device or a Graphics Processing Unit (GPU), allocate 1 GiB additional memory overhead for each device.
- If Secure Encrypted Virtualization (SEV) is enabled, add 256 MiB.
- If Trusted Platform Module (TPM) is enabled, add 53 MiB.
